

Brett Timperman

DevOps / Platform Engineer

Cincinnati, OH

Professional Summary

DevOps and Platform Engineer with deep experience in containerization, Kubernetes, CI/CD automation, and hybrid cloud/on-prem architectures. Proven ability to design, deploy, and operate scalable infrastructure across enterprise and startup environments. DockerCon 2016 presenter with strong communication and cross-team collaboration skills.

Resume-as-Code

The PDF version of this resume is generated automatically by a public GitHub Actions pipeline in my resume repository (<https://github.com/timperman/resume>). I maintain the resume by committing changes to README.md, which serves as the single source of truth. A GitHub Actions workflow uses Markdown, LaTeX, and lightweight shell scripting to produce a polished PDF and commit it back to the repository. This approach ensures the GitHub-rendered resume and the downloadable PDF remain perfectly in sync, and reflects my commitment to *everything-as-code*—from infrastructure and CI/CD to documentation and workflows.

Professional Experience

Workday — DevOps / Platform Engineer

August 2023 – September 2025

- Built and maintained CI/CD pipelines (GitHub Actions, Flux/GitOps, Jenkins) supporting enterprise SaaS platforms.
 - Automated infrastructure provisioning on AWS using Terraform and cloud-native tooling.
 - Operated and supported Kubernetes-based platforms on AWS EKS with production-grade observability (Prometheus, Grafana, CloudWatch).
 - Operated and supported Docker container registries using JFrog Artifactory and AWS ECR.
 - Implemented Static Application Security Testing (SAST) with Snyk and resolved surfaced issues.
 - Improved deployment reliability and reduced operational toil through automation.
-

Pantomath — Software Engineer

January 2023 – July 2023

- Developed Node.js REST microservices in Typescript for secure client database exports and data extraction.
 - Deployed extraction services as containerized workloads on AWS EKS.
 - Designed and executed hybrid cloud/on-prem deployments using Docker for TQL environments.
-

Kroger — Software Engineering Manager, Principal Software Engineer

February 2013 – April 2022

- Led Core Engineering, a cross-organizational enablement team that partnered with product teams to modernize applications for cloud deployments (Azure AKS, Google Cloud, Rancher) and to implement best practices such as containerization (Docker), CI/CD pipelines (GitHub Actions, GitLab CI), and monitoring (Prometheus, Grafana, ElasticSearch, Kibana, Kafka).
 - Led large-scale migrations including:
 - Migrating on-prem deployments to cloud (Azure AKS) and on-prem Kubernetes clusters (Rancher).
 - ✱ Assisted teams in migrating on-prem databases to Azure-based services and adopting best practices for data replication in hybrid deployments.
 - Migrating code repositories from on-prem GitLab and GitHub Enterprise to GitHub.com.
 - Migrating CI/CD pipelines from GitLab CI and TeamCity to GitHub Actions.
 - Partnered with a large variety of product teams to implement CI/CD pipelines (GitHub Actions, GitLab CI, Azure DevOps) that automated building, testing, and deploying Java/SpringBoot (Maven and Gradle), Node.js (NPM), and other applications.
 - Implemented downtime-free deployments to Kubernetes and other cloud platforms using continuous delivery best practices such as roll outs, blue/green deployments, and canary deployments.
 - Led early Docker container adoption and Kubernetes platform standardization initiatives.
 - Supported JFrog Artifactory Docker container registry with replication between cloud and on-prem instances.
 - Implemented security scanning (SCA) at the container level with JFrog XRay.
 - Developed full-stack web-applications supporting Kroger Pickup and Delivery including React.js and Angular front-end applications and Java/SpringBoot back-end REST services.
 - Collaborated with engineering teams to improve reliability, performance, and scalability.
-

Education

Bachelor of Science in Computer Science

Western Kentucky University — *December 2004*

Selected Presentation

DockerCon 2016 — Technical Presenter

- Presented on production Docker workflows and containerization best practices.
 - ► <https://www.youtube.com/watch?v=sHS6jhXCwWM>
-

Technical Skills

Cloud & Automation: AWS, Azure, Google Cloud, Terraform infrastructure-as-code

Containers & Orchestration: Docker, Kubernetes (AWS EKS, Azure AKS, Google GKE), Helm

Container Storage: JFrog Artifactory, AWS ECR, Docker Registry

CI/CD: GitHub Actions, GitLab CI, Flux (GitOps), Jenkins

Languages & Scripting: Node.js, TypeScript, Go, Java/SpringBoot, Python, Bash, React.js, Angular

Build Tools: NPM, Maven, Gradle

Security Scanning: JFrog XRay, Snyk

Monitoring & Observability: Prometheus, Grafana, ELK (ElasticSearch and Kibana), Kafka

Databases & Persistence: SQL (PostgreSQL, MySQL, AWS RDS, Azure Database), MongoDB, Redis, AWS S3

Platforms: Linux, Hybrid Cloud / On-Prem
